

## Emergency Treatment of Dental Trauma

Prof. Nan Sim Pang

Dental trauma is a common occurrence that can result in damage to teeth and surrounding structures. Anterior teeth are particularly vulnerable to trauma due to their prominent position in the mouth. Effective management of anterior tooth trauma is critical to achieving a successful outcome and preserving the patient's esthetics and function.

The initial management of anterior tooth trauma should focus on controlling bleeding, stabilizing the tooth, and addressing any associated soft tissue injuries. A thorough examination, including radiographs and pulp testing, is essential for accurate diagnosis and treatment planning. Depending on the extent of the injury, treatment options may include composite resin restorations, veneers, or crowns. In cases of severe trauma, endodontic therapy or extraction may be necessary.

Prognosis for anterior tooth trauma varies depending on several factors, including the type and extent of the injury, the age of the patient, and the pre-existing restoration conditions. Generally, the prognosis for a traumatized tooth is better if treatment is initiated promptly and the tooth is adequately stabilized. Proper oral hygiene and regular follow-up visits are essential for long-term success.

In conclusion, anterior tooth trauma is a common occurrence that requires prompt and appropriate management to preserve esthetics and function. Early diagnosis and treatment are critical to achieving a successful outcome. Patients with anterior tooth trauma should be carefully monitored and treated by a dental professional with expertise in trauma management.

### Profile

- \* D.D.S., College of Dentistry, Yonsei University
- \* M.S.D., Graduate School, Yonsei University
- \* Ph.D. Course of Dental Science, Yonsei University College of Dentistry
- \* Internship / Residency, Department of Conservative dentistry, Yonsei University College of Dentistry Dental Hospital
- \* Fellow/Clinical research assistant professor, Department of Advanced General Dentistry, Yonsei University College of Dentistry
- \* Clinical Assistant Professor, Department of Advanced General Dentistry, Yonsei University College of Dentistry
- \* Clinical Associate Professor, Department of Advanced General Dentistry, Yonsei University College of Dentistry
- \* Present) Clinical Professor, Department of Advanced General Dentistry, Yonsei University College of Dentistry
