

## Practical digital life as a private practitioner

Dr. Soo Young Lee

More than 10 years have passed since digital began to be introduced into dental clinical practice. Among all dental clinics, the number of dental clinics that use digital technology or devices is still not very high.

Although digital is spreading into dental care, one reason may be that even in dental clinics that have introduced digital, its usability does not keep up with the level known in advertising.

Accordingly, the speaker, as a dental practitioner who has been introducing and using various digital equipment in dental practice for 12 years, would like to introduce a digital environment suitable for everyday practitioners.
