

Key Points of Root Canal Retreatment Learned From Clinical Cases

Dr. Cho, Sin Yeon

The purpose of this lecture is to present key clinical considerations in nonsurgical endodontic retreatment through a case-based approach, focusing on the identification of failure causes and strategies for improving treatment outcomes.

Methods:

A series of clinical cases of endodontic retreatment were analyzed. The causes of failure in previous root canal treatments were evaluated based on radiographic and clinical findings, including microleakage, missed canals, and inadequate instrumentation and irrigation. Techniques for the removal of previous filling materials and residual tissues were demonstrated, along with approaches for locating previously untreated or insufficiently treated areas. In addition, enhanced irrigation strategies were introduced to address the limitations of prior treatments.

Results:

Case-based analysis demonstrated that accurate identification of failure etiology, thorough removal of existing filling materials and infected tissues, and the application of improved irrigation strategies contributed to more effective disinfection and favorable clinical outcomes in retreatment cases.

Conclusion:

Successful endodontic retreatment depends on a systematic understanding of previous treatment failures and meticulous execution of retreatment procedures. A case-based approach provides practical insights that can enhance clinical decision-making and improve the prognosis of retreatment cases.

Learning Objectives

- * Identify the primary causes of failure in previous root canal treatments and assess the prognosis for nonsurgical retreatment.
- * Develop strategies for effective removal of existing filling materials and residual infected tissues within the root canal system.
- * Apply enhanced irrigation strategies to improve disinfection and clinical outcomes in retreatment cases.
- * Integrate case-based decision-making principles into daily endodontic retreatment practice.

Profile

- * DDS, Yonsei University College of Dentistry
- * PhD, Yonsei University Graduate School of Dentistry
- * Clinical Instructor, Department of Conservative Dentistry, Yonsei University Dental Hospital
- * Professor, Department of Conservative Dentistry, National Health Insurance Service Ilsan Hospital
- * Director, Yonsei Ivy Dental Clinic
