

Lower Arch Full Mouth Rehabilitation : “The All on X ” and Implant Overdenture What is your choice ?

Dr. Sung Hwan Oh

Implant supported fixed complete denture (ISFCD) : “ The All on X ” has been used successfully in long term in Europe and US after introduced by Dr Paulo Malo but there is not popular in Korea because some mechanical problems in prosthesis , In recent days, digital technology was introduced and the design and accuracy of All on X prosthesis are dramatically improved and some mechanical problems are solved technically , In this presentation, We are going to discuss current treatment strategy of All on X as follows

1. Implant supported fixed complete denture “ All on X
2. Digital guided & graft - less minimal invasive implant placement with minimum 4-implant at mandible, 2- additional implant at maxilla if possible
3. Long & tilted implant for A-P spread ↑ & Cantilever length ↓
4. Immediate implant placement as possible for the preservation of mandibular position & vertical dimension with digital workflow
5. Immediate loading after implant placement as possible for the provisional & functional restoration
6. Retrievable screw type prosthesis with accuracy

Profile

- * Department of Oral and Maxillofacial Surgery Ph.D, Division of Dentistry, Graduate course, Kyung Hee University
- * Department of Oral and Maxillofacial Surgery M.S.D., Division of Dentistry, Graduate course, Kyung Hee University
- * College of Dentistry, Kyung Hee University D.M.D.
