

## Shade-Taking, What Should We be Concerned About?

Hyeon Jin Jo

In dental treatment, cooperation between dentists and dental technicians is essential. Our communication usually occurs through digital dental photographs, and accurate images are crucial for dental technicians to produce high-quality ceramic restorations.

The clinical photos we capture daily often convey more errors than expected. Additionally, even with accurate photos, there can be significant variations depending on the display we're viewing them on.

Through this lecture, we aim to discuss how to correct these errors and how to minimize errors when capturing images.

### Profile

- \* Dongnam health college grad. (2010)
- \* Natural dental lab (2013~)· 1st Gyeonggido dental technical contest 1st winner
- \* Noritake ceramic contest 2nd winner
- \* GC KOL
- \* Dental technical conference lecturer
